

TITLE:

RANDOM PASSWORD GENERATOR.

OBJECTIVE:

To generate a random password using python's random and string modules.

CODE:

```
import random

import string

length = int(input("Enter password length:
"))

characters = string.ascii_letters +
string.digits

password = ""

for i in range(length):

    password += random.choice(characters)

print("Generated Password:", password)
```

OUTPUT:

```
[1]: import random
import string

length = int(input("Enter password length: "))

characters = string.ascii_letters + string.digits

password = ""

for i in range(length):
    password += random.choice(characters)

print("Generated Password:", password)

Enter password length: 8
Generated Password: 8MdgJn3j
```

CONCLUSION:

This project demonstrates the use of Python modules and string manipulation to generate secure random passwords.
